

Core™

Auto Parts Fulfillment

■ **Core Robotic Picking System** gives you the flexibility to manage high SKU complexity, irregular parts, mixed packaging, variable demand, and labor constraints.

Core keeps auto parts fulfillment moving, at scale.

Auto parts distributors and retailers need automation built for real parts fulfillment: broad SKU assortments, mixed channel demands, variable packaging, and order profiles that shift by store, service center, customer, and repair need. Core helps reduce manual exception handling and keeps fulfillment moving as parts demand changes.

HANDLES AUTO PARTS SKU COMPLEXITY AT SPEED

Auto parts come in many forms and packaging types – heavy, fragile, cylindrical, flexible, rigid, reflective, sharp-edged, and awkward shapes.

GROWS CAPACITY WITHOUT ADDING LABOR

Scale volume while maximizing workforce productivity, putting robotic picking in place where people do the task today.

WORKS WITHIN YOUR EXISTING WAREHOUSE

Built to support the workflows you already run, from GTP picking to tote-to-box, tote-to-tote, sorter induction, consolidation, and more.

Built to meet the hard demands of your fulfillment operations.

Ready for your SKU mix

Core is engineered to handle broad and difficult SKU assortments, including small, porous, irregular, cylindrical, and heavy items commonly excluded from automation.

Precise pick-and-place execution

Core controls grip, transfer, orientation, and placement to move each item with accuracy, consistency, and product integrity.

Keeps pace with changing assortments

Software-driven adaptability helps Core handle new SKUs and packaging changes in real time without retraining or ramp-up cycles.

Industrial-grade reliability for peak performance

Perception, adaptive gripping, motion planning, rugged hardware, and smart software are integrated into a system built for the toughest fulfillment environments.

Seamless deployment. Guaranteed performance.

- 99+% uptime and accuracy.
- Turnkey integration with your WMS/WES platforms and existing operations.
- Around-the-clock productivity proven in the field for 10+ years.
- 24/7/365 Lifecycle Services that protect performance.
