

More than sortation. An integrated flow.

■ High-density robotic sortation, flexible item handling, automated carton takeaway, and configurable software are all in one system with Stride.

Automating the sort is only part of the job.

When comparing autonomous mobile robot (AMR) sortation to Stride, consider the labor, item handling, and supporting systems required to keep orders moving.

PRIORITY	AMR SORTER	STRIDE
Connect the full flow	Scope varies. Routing, takeaway, packout, and audit may require added equipment or integration.	One integrated system. Routing, sortation, takeaway, controls, and software, with optional packout and audit are included.
Handle your SKU mix	Eligibility depends on configuration. Robot model, tray or belt size, item stability, and discharge method determine coverage.	Handle varied merchandise securely. Supports apparel, polybags, and small, bulky, rolling, or irregular products. Large shuttle and direct-to-container delivery minimize tote or carton delivery failure.
Get more from induction	Multi-item induction is SKU-dependent. Item size, stability, tray capacity, and configuration affect eligibility.	Batch across a broader SKU mix. Multiple same-SKU units can be inducted together when eligible, using manual or robotic induction.
Reduce closeout labor	Manual closeout takes labor. Staffing, walking, and lifting needs may remain; automated options vary.	Reduce walking and lifting. Fill-level, order-completion, or weight criteria trigger automated takeaway.
Scale with growth	Expansion needs vary. Adding robot induction points, destinations, or sort-field space can increase capacity, but longer induction-to-destination travel can degrade throughput.	Expand with sustained performance. Add modular capacity as demand grows while maintaining throughput across the system. Dense destinations and parallel motion support brownfield fit.

Build more productive capacity.

Parallel motion, localized resilience

Independent shuttles limit disruption from localized service events while unaffected equipment continues processing orders.

More productive workforce

Lower labor requirements across induction and packout help your existing team handle more volume.

Build on your existing operation

Add sortation capacity that works with your established WMS and material flows, from AS/RS and manual selection, to cross-dock operations and more.

Keep destinations productive

Reduce wait time for carton removal and replacement so destinations remain available for incoming work.

What's the workaround your sorter is costing you?

Bring your volume, staffing, and order profile, and see where Stride can reduce handling and support your growth.
