

Stop paying for every manual put.

■ Put-to-light guides the worker. Stride moves the product. Reduce repetitive handling and build capacity, with less dependence on labor, with Stride.

Automate the work behind every put.

Put-to-light leaves product movement and placement to the operator. Stride automates that work from induction to destination placement, reducing the manual handling that limits throughput.

PRIORITY	TRADITIONAL PUT-TO-LIGHT	STRIDE
Reduce labor dependence	Operators complete every put. Lights identify the destination. Workers move and place each item.	Automate product movement. Shuttles transport and discharge items to their assigned destinations.
Process demand efficiently	Staffing sets the pace. Throughput depends on available operators and their manual put rate.	Keep products moving in parallel. Independent shuttles move products to multiple destinations simultaneously.
Scale with growth	More volume can require more labor or put walls. Adding operators can crowd work areas and slow each person's pace.	Add capacity as demand grows. Solution expands with more modules, enabling induction and destination capacity to match demand.
Improve sort accuracy	Every put depends on the operator. Lights guide placement, but workers must put the right items in the right destinations.	Let shuttles cover the distance. Items enter at a fixed station through manual or robotic induction. Shuttles handle travel and destination placement.
Streamline outbound flow	Some flows add another handling step. Cubby-based layouts may require a transfer to an outbound container before packing.	Sort directly into totes or cartons. Completed outbound containers discharge via automated takeaway.

Build capacity with less manual handling.

Reduce labor per unit

Offload repetitive transport and placement to shuttles, reducing the manual work required for each unit.

Expand around your operation

Add sortation capacity in stages. Match induction and downstream flow to your throughput needs.

Reduce walking and handling

Cut labor demands and fatigue with fixed induction and automated takeaway, supporting employee retention.

Make the business case

Compare labor, peak staffing, and handling costs with the full cost of automation over the system's life.

What is every manual put costing you?

Bring your volume, staffing, and order profile, and see where Stride can reduce handling and support your growth.
